

POKA LAMBRO TELECOMMUNICATIONS, INC.
d/b/a DIGITAL CELLULAR OF TEXAS
TTY REPORT
January 15, 2002

I. Network infrastructure software development

Poka Lambro Telecommunications, Inc. d/b/a Digital Cellular of Texas ("Poka Lambro") utilizes a Nortel Networks switch to provide digital wireless services in certain areas throughout its market. Poka Lambro understands that Nortel Networks has completed its development of software and product tests (see letter from Nortel submitted in the April 2001 quarterly report of the TTY Forum ("Nortel Letter")).

II. Handset development and testing plans

Poka Lambro must rely on handset vendors to develop the required handsets. When handsets are available, testing can be performed with area PSAPs to ensure compatibility.

III. Beta testing and lab testing

Poka Lambro must rely on Nortel Networks and handset vendors for initial conformance testing.

IV. Release and general availability to carriers of network infrastructure software

Poka Lambro understands that Nortel Networks has developed a TTY solution and that it is currently commercially available.

V. Availability to carriers to full acceptance test units

Poka Lambro understands that Nortel Networks plans to test and confirm the solution performance once installed in Poka Lambro's system.

VI. Efforts toward achieving digital wireless solution capability with enhanced TTY devices

Poka Lambro understands that the TTY solution provided by Nortel addresses Baudot type messages only. Other capabilities may be included later, after standards are adopted.

VII. Carrier coordination of testing with PSAP

See response to item 2. above.

VIII. Carrier testing activities, including field testing, consumer end-to-end testing, and other necessary tests

Poka Lambro currently operates using the MTX09 software load and expects to comply with the Commission's TTY requirements by the June 30, 2002 deadline.

IX. Retail availability of necessary consumer equipment.

Poka Lambro does not have any information regarding when handsets will be available. Poka Lambro has not been informed of any required hardware changes and understands that Nortel's software is the only requirement for implementing a TTY solution.

X. Geographic scope of network infrastructure deployment

Poka Lambro provides service to cellular RSAs 654 and 659.

Respectfully Submitted,
